

FOR USE UPON RECEIPT — 2005

AXCELL DIVISION OF HEYCO DEVELOPS NEW SNAP-IN-MOUNT CORD GRIPS

Snap-In-Mount Cord Grips

New Products: Axcell/Heyco Snap-In-Mount Cord Grips for special applications where limited clearance exists inside electrical cabinets or housings.

Design: Axcell/Heyco In-House Product Design & Fabrication Team.

Manufacturer: Axcell division of Heyco Products, Inc.

Product Applications: Axcell/Heyco Snap-In-Mount Cord Grips can be configured and produced for virtually all electrical power, HVAC and systems-management installations. They are well suited for non liquid-tight strain-relief applications, where minimized assembly time is important to manufacturing operations, or where spatial restrictions prevent threading of standard locknuts.

Snap-In-Mount Cord Grips can be custom specified and manufactured to accommodate a range of cable and wire diameters, and to suit any fixed or mobile application with commercial, industrial or residential electrical requirement.

Product Description: Axcell/Heyco Snap-In-Mount Cord Grips have smooth, rounded interior edges, that allow cords and cables from .079- to more than 1.00-inch in diameter to insert easily through the grips, without dangerous binding or scraping of insulation. This facilitates a safe, secure passage through electrical housings or cabinets, which resists pulling, twisting or pulsing forces, preventing debris from entering the housing.

Construction & Finishes: Axcell/Heyco Snap-In-Mount Cord Grips are custom constructed to customer application, in high or low production runs, from durable polyamide 6/6 nylon. They provide lasting high strength, chemical resistance and good electrical properties.

Snap-In-Mount Cord Grips can be specified in black, white or matched to a color chip. They meet UL 94V-2 flammability requirements.
