

EXTRUDED WIRE HARNESS CLIP

NEW PRODUCT RELEASE

We are pleased to announce the EXWHC, Extruded Wire Harness Clip, to the Richco's line of wire harness clips. These clips are ideal for holding and routing wire harnesses in a multitude of applications. They come in three different diameters to accommodate a variety of wire bundle sizes. The wiring harness can easily be slid into the side of the part and locked in place. The two larger diameters have a unique locking design making it easy to insert and remove large wire bundles. These clips are extruded, so they can be ordered in any specified length, and can be mounted with either a screw or a rivet. See Richco's full line catalog to review our extensive line of clips and clamps.
